Some SONY Bravia (as well other brands) offers the possibility to have PIP (Picture-In-Picture) and PAP (Picture-and-Picture). The figure above is a PAP Picture and the images comes from two different sources.

PIP is when a small source is displayed inside the main screen. The small picture may moves in the four corners of the TV.

Not all SONY Bravia haves this feature. The W models support it. The S models does not.

Actually, only two sources are supported. May be in a close future we will have six ... or more sources in the same display.

Thanks,

Giovanni A. Orlando.
